Title	Encore Public Website — Software Requirements Document (SRD)
Reference	ENCORE-SRD-WEB-001
Version	1.0 (first issue). Parent document: ENCORE-SRS-001 v2.1
Status	Draft for client review and formal approval
Prepared for	Encore Holdings Group
Classification	Confidential – project planning and development document
Proposed stack	Next.js · TypeScript · Supabase Auth & PostgreSQL · Vercel (as per SRS §4.1)
Languages	English and Swahili at launch; French reserved for regional expansion (SRS §22.2)

01 Purpose, Scope & Method

This SRD turns the public-website content of the Encore SRS (ENCORE-SRS-001 v2.1, 71 pages, 46 sections) into a single, buildable specification — wearing Encore's brand colours, the Outfit typeface and the sign-up / sign-in experience benchmarked from CargoLink.

14
Public pages defined in SRS §7.1

2
Roles that may self-register publicly

2 + 1
Languages: English, Swahili (+ French later)

7
Brand colours supplied by Encore

1.1 Purpose

To give Encore Holdings Group, the design team and the development team one agreed definition of **what the public website must contain, how it must look, how it must behave and how it connects to the private platform** — before any code is written.

1.2 What is in scope

IN SCOPE — THIS DOCUMENT

- All 14 public pages (SRS §7.1)
- Header, footer, navigation, language switch
- Sign-up and sign-in screens (public entry points)
- Contact, inquiry and lead-capture forms
- Public AI assistant widget and WhatsApp entry
- Brand, typography and component rules
- SEO, accessibility, privacy and consent
- Data the website reads / writes in Supabase

OUT OF SCOPE — COVERED BY THE SRS, NOT HERE

- Super Admin, CEO, Operations, Finance, Verification, Marketing, Support dashboards
- Transporter, Cargo Owner, Driver and Affiliate portals (behind login)
- Matching engine, quotations, bookings, GPS, invoicing, settlements
- WhatsApp / AI back-office automation
- Native Android / iOS apps (SRS §3.2)

1.3 Method

#	Step	Result
1	Read the complete SRS (all 71 pages) and extracted every public-facing requirement, constraint and guardrail.	Section 02 + Appendix A (every SRS section classified)

#	Step	Result
2	Visited cargolink.tz as a normal visitor: homepage text, navigation, links, CSS, fonts and colours were read directly. The sign-in and sign-up screens (app.cargolink.tz) were analysed from the screenshots supplied by the client.	Section 03 (benchmark: what to follow, adapt and avoid)
3	Applied Encore's brand: logo from the SRS cover, supplied colour codes, Outfit typeface.	Section 04 (design system) with live mock-ups
4	Wrote page-by-page, form-by-form requirements with IDs, priorities and SRS traceability.	Sections 05 – 12

WHY THIS MATTERS — ONE RULE DRIVES THE WHOLE SITE

The SRS states **"Automation should increase trust, not replace accountability."** (§1.2) and **"The system must never display an unverified company or truck as verified."** (§5.6). The public website is where trust is first earned, so every claim, badge and number on it must be real, approved and defensible.

02 What the SRS Requires of the Public Website

Complete extraction. Every SRS clause that touches the public website, with what it means for the build. Clauses with no public impact are listed in Appendix A.

FIVE CONCLUSIONS THAT SHAPE THE BUILD

- **Only two public sign-up roles** — Cargo Owner and Transporter. Drivers, affiliates and staff never self-register.
- **No money on the public site** — no commission rates, tiers or prices until Encore approves them (SRS §42).
- **No promises, no vanity numbers** — no guaranteed loads, income, delivery rates or user counters (SRS §3.2, §35.2).
- **Honest verification** — "Registered" never reads as "Verified"; trust badges map to real statuses (SRS §5.3, §5.6).
- **One platform** — the website, portals and admin share one Next.js + Supabase application and one login.

SRS §	Requirement (summarised from the SRS)	Implication for the public website
§1	Platform connects **cargo owners, transporters, truck owners, drivers and approved affiliates**; AI-assisted; WhatsApp + email communication; one centralised ecosystem with role-based workspaces.	Home page must speak to all five audiences and route each to the right journey.
§1.1	Customer receives **one official invoice and pays the company**; Encore then settles the transporter. No automatic split payment.	"How it works" and FAQ explain the single-invoice model. No split-payment checkout anywhere on the site.
§1.2	"Automation should increase trust, not replace accountability." Critical decisions stay human.	Show "human-verified" messaging; label the chatbot as an AI assistant with human hand-off.
§2.1–2.3	Vision: trusted digital logistics marketplace across major African trade corridors. Mission: digitise cross-border freight via verified transporters, transparent quotations, secure documentation, shipment visibility. 13 strategic objectives.	Source copy for About page and Home hero. Objectives become the "Why Encore" pillars.

SRS §	Requirement (summarised from the SRS)	Implication for the public website
§2.4	Balanced Growth cycle: **VERIFY → MATCH → DELIVER → REPEAT**. Genuine business over registration volume.	Brand framework used on Home and How It Works. No vanity "users signed up" counters.
§3.1	In-scope modules include **Public Website and Marketing Pages** (#1) and **Authentication and User Account Management** (#2).	Confirms the website and auth are formal deliverables.
§3.2	Out of scope: native apps; Encore owning trucks; **guaranteed cargo availability or guaranteed transporter earnings**; legal services.	No "guaranteed income / guaranteed loads" copy. No app-store badges.
§4.1–4.3	Next.js, TypeScript, Supabase Auth, PostgreSQL + RLS, Vercel. One integrated application; each user enters a workspace for their role; responsive desktop / tablet / mobile.	Public site and portals share one codebase and one auth. After login the user is routed to their role workspace.
§5.1	Two account models: **staff** created only by Super Admin; **external users** — transporters and cargo owners self-register; affiliates/brokers by invitation; drivers linked to a transporter.	Sign-up offers only **Cargo Owner** and **Transporter**. Driver and Affiliate are shown as invitation-based, not selectable. No staff registration anywhere.
§5.2	Staff log in with **username + password**, first-login reset, MFA for privileged accounts, failed-login monitoring and rate limiting. Staff have no public self-registration.	A separate, discreet staff sign-in route (username field). Not part of the customer sign-up flow.
§5.3	Self-registration steps: **1** select account type, **2** personal/business info, **3** email and/or mobile, **4** credentials, **5** contact verification, **6** accept terms & privacy, **7** limited dashboard, **8** complete profile, **9** submit for approval. "Registration shall not automatically mean … verified."	Defines the sign-up screen fields and the post-sign-up message ("Account created — verification pending").
§5.4.8–5.4.11	Role definitions for Transporter, Cargo Owner, Driver, Affiliate/Broker.	Content basis for the For Transporters / Cargo Owners / Drivers / Affiliate pages.
§5.6	Statuses: user (Pending Contact Verification, Active, Limited, Suspended); company (Unverified, Under Review, Verified, Rejected, Expired); truck; driver; partner. **Never show unverified as verified.**	Public explanation of statuses (FAQ / verification explainer). Any trust badge must map to a real status.

SRS §	Requirement (summarised from the SRS)	Implication for the public website
§6.9	Brand colours **Gold #FFBC0D**, **Charcoal #1D1D1B**, white and neutral greys; accessible typography and contrast; light / dark / system theme.	Foundation of Section 04. Light theme at launch; dark mode token-ready.
§7.1	14 pages: Home, About Encore, How It Works, For Cargo Owners, For Transporters, For Drivers, Freight Corridors, Affiliate Programme, Contact, FAQ, Privacy Policy, Terms and Conditions, Login, Registration.	The page list of Section 06 — all 14, none dropped.
§7.2	Features: responsive design; professional brand presentation; SEO-friendly structure; clear calls to action; contact and inquiry forms; country and corridor information; registration links; approved trust and verification information; analytics subject to privacy requirements. **Public pages shall not expose private truck documents or confidential user records.**	Becomes functional requirements WEB-FR-001 … in Section 08.
§8–9	Transporter onboarding is progressive (limited dashboard first). Company profile fields; company members (owner, administrator, fleet manager, dispatcher); truck fields; truck statuses (Available, Assigned, On Trip, Under Maintenance, Temporarily Unavailable, Suspended).	For Transporters page explains the 10-step onboarding and what is needed (company, fleet, documents, drivers).
§10	Driver accounts are linked to a transporter; portal gives assigned trips, milestones, incident reporting, proof of delivery; daily progress report by **16:00 East Africa Time** (configurable, Encore to approve).	For Drivers page: how a driver joins (invitation from a transport company) and what the driver does. Reporting time shown only once approved.
§11	Documents: company registration certificates, business licences, vehicle registration cards, insurance, road permits, driver licences, identity documents; configurable by country. AI extracts fields, humans approve. Private storage, malware scanning, signed links.	Transporter page shows a “documents you will need” checklist. Public site never displays or links to a private document.
§12–13	Cargo owner profile and dashboard; cargo request fields (description, category, weight, volume, truck type, loading location, destination, pickup date, handling, attachments, contact).	For Cargo Owners page previews the request information needed; submission happens after sign-in.

SRS §	Requirement (summarised from the SRS)	Implication for the public website
§14–16	Matching on origin/destination, route, truck category, capacity, verification, permits, performance. Staff review before confirmation. Quotation by human approval. Booking after both parties accept.	How It Works explains matching + human review honestly (no "instant auto-booking" claims).
§17	Lifecycle: **REQUEST → MATCH → QUOTE → APPROVE → TRACK → CLOSE**; shipment statuses; proof of delivery.	The 6-stage How It Works graphic (Section 06, P3).
§18	GPS where compatible; otherwise driver-reported updates, **clearly labelled as driver-reported**. Location restricted to authorised users on active shipments.	"Track Shipment" is for signed-in authorised users; no public map of live trucks. Fallback labelling explained in FAQ.
§19	5% standard commission; USD 300 minimum on qualifying international routes; managed-logistics margin; all marked **for confirmation** (§42.1).	**Do not publish commission rates** on the site until Encore approves them.
§20	Central invoicing; payment methods: bank transfer, mobile money, approved online payment services; invoice statuses.	Payments explainer + FAQ (methods listed only as approved by Finance).
§21	Affiliate & Broker programme: **invitation-only** initially; two partner types; tiers Starter 10% / Growth 15% / Premier 20% (proposed); 60-day attribution window; 180-day measurement; rewards only on completed, reconciled business; fraud prevention.	Affiliate Programme page: explain the programme and "request an invitation". Tier percentages stay hidden until rules are approved (§21.7). Referral link `?ref=CODE` is captured at sign-up.
§22	AI Assistant in English and Swahili: explains Encore, guides registration, explains onboarding requirements and verification statuses, answers FAQs, hands off to humans. **Must not** approve verification, promise cargo or income, invent shipment data or expose private records.	Public chat widget with disclosure, bilingual, guarded scope, escalation to Contact / WhatsApp.
§23	WhatsApp Business + email: consent, opt-out, templates.	Click-to-chat button; sign-up captures communication preferences and consent.

SRS §	Requirement (summarised from the SRS)	Implication for the public website
§24	Corridors: **Tanzania–Zambia** (Dar es Salaam → Lusaka, Ndola, Kitwe, Chingola) = core pilot; **Tanzania–DRC** (→ Lubumbashi, Likasi, Kolwezi) expands with verified capacity; roadmap Malawi, Rwanda, Burundi. Border info is never presented as official government confirmation.	Freight Corridors page with corridor cards and status labels (Pilot / Expanding / Planned).
§25	Lead management: name/company, contact, country, business category, lead source (includes **website forms**), assigned staff, status.	Contact / inquiry / invitation-request forms write to `marketing_leads` with source and UTM data.
§26	Support tickets and incident management.	Contact page creates a support ticket or lead; AI hand-off creates a ticket.
§28, §32.1	Notifications (in-app, email, WhatsApp); Supabase Auth with email/contact verification and session management.	Verification email / OTP screens; sign-in sessions; password recovery.
§29	Entities include profiles, cargo_owners, transporter_companies, marketing_leads, support_tickets, referral_codes, referral_attributions, ai_conversations, notification_logs, audit_logs.	Defines what the website reads and writes (Section 10).
§30	Authentication security (hashing, rate limiting, MFA), server-side authorisation, API security, audit logging, data-protection policy (collection, purpose limitation, minimisation, retention, access, deletion, cross-border), security testing before real documents are used.	Security requirements of Section 11 and the content of the Privacy Policy page.
§31	Usable by non-technical customers; works on desktop, laptop, tablet, smartphone.	Mobile-first design; plain-language copy; large touch targets.
§33.2–33.4	Workflows: Transporter onboarding, Cargo Owner onboarding, Affiliate/Broker onboarding.	Journey diagrams in Section 07.
§34	Phase 1 (Nov–Dec 2026): secure foundation, customer and transporter portals, email/contact verification. MVP priority starts with authentication and registration.	Website delivery is sequenced inside Phase 1 (Section 13).
§35.2	Growth indicators are “planning targets, not guaranteed commercial outcomes”.	No “thousands of businesses”, “99% reliability”, or similar statistics unless Encore can prove them.

SRS §	Requirement (summarised from the SRS)	Implication for the public website
§38	Acceptance #2, #4, #6, #7, #9: staff cannot self-register; transporters and cargo owners can register; driver accounts linked; affiliates by invitation; private documents never reachable via public links.	Copied into website acceptance criteria (Section 12).
§40–41	Risks: fraudulent documents, fake affiliate referrals. Client inputs: company details, domain, hosting, country document checklists, payment channels, WhatsApp provider.	Anti-abuse controls on forms; client input list in Section 14.
§46	"ENCORE HOLDINGS GROUP — **Reliable Transport. Real Results.** *Grow Slow. Grow Sure.*"	Brand tagline and sign-off line for header, footer and About page.

03 Benchmark: CargoLink Analysis

Encore asked for the sign-up / sign-in screens, the typeface and the header style of **cargolink.tz** to be followed closely. This section records what that site contains and decides, element by element, what Encore follows, adapts or avoids.

3.1 What CargoLink contains

POSITIONING

"Seamless Cargo" — an all-in-one logistics platform for East & Central Africa, Dar es Salaam as port hub. Five service modes: Cargo & Road Freight, CityXpress (same-day city delivery), Movers, InTransit (vehicle transport), Warehouse & Storage.

HOMEPAGE STRUCTURE (TOP TO BOTTOM)

1. Header: logo · pill menu · support phone · "Login →"
2. Hero: giant headline + "Get Started"
3. Scrolling trust strip of institutions
4. How It Works (4 steps)
5. Solutions (5 service cards)
6. Service-area countries (9, with flags)
7. "What we offer" 4 blocks
8. Final CTA + 4 statistics
9. Footer (newsletter, 4 link columns, legal)

Area	Observed on cargolink.tz
Navigation	Solutions · Track Shipment · Services · About · Contact; support phone; Login. App (login/register) lives on a separate subdomain (`app.`).
Site map	Home, Solutions, Services (+5 service pages), Track, About, Team, Careers, Investors, Blog, Case Studies, FAQ, Contact, Support, Privacy, Terms, Cookies, Request Data Removal.
How it works	Choose Your Service → Enter Your Details → Confirm & Pay → Track & Done.
Coverage	Tanzania, Kenya, Uganda, South Sudan, Rwanda, Burundi, DR Congo, Zambia, Malawi — each with flag and corridor label.
Features promised	Live tracking and tracking links, digital documents and PODs, invoices and payouts, analytics, rate comparison from multiple transporters/forwarders.
Typography	**Outfit** (headings and body, loaded from the site), Work Sans (secondary). Large, heavy display headline with an *italic* final word.
Colour & effects	Near-black `#0D181B` text and buttons, white background, soft blue/pink blurred glows, red accent star, glass-morphism cards, 3D isometric illustrations.
Stack hints	Nuxt (Vue) + Tailwind CSS; country flags served from flagcdn.com; separate app subdomain.

3.2 Sign-in and sign-up screens (from the supplied screenshots)

SIGN-IN

- Split screen: form left, rounded illustration panel right
- Pill logo top-left; centred “Welcome Back” + one-line subtitle
- “New to CargoLink? **Sign up**” tinted box above the form
- **Email | Phone** segmented tab
- Icon-in-input fields, show/hide password eye
- “Remember me” and “Forgot password?” on one line
- Full-width rounded Sign-in button
- Glass cards over the illustration: “Welcome Back”, “Quick Access · 24/7 Available”

SIGN-UP

- Same split layout, different illustration (truck on blue road)
- “Select account type”: 6 cards — Shipper, Driver, Carrier, Forwarder, Movers, Warehouse; selected card gets a tick
- Full name · Email · **Phone with country code (+255, flag)** · Password with eye
- Black “Submit” button
- “Already have an account? Sign in”; Terms and Privacy line
- Glass cards: “Fast Delivery”, “Delivery Schedule” calendar

3.3 Decision matrix — follow, adapt, avoid

Element	Decision	Encore treatment
Outfit typeface	FOLLOW	Outfit is the single brand typeface (weights 300–800). Self-hosted via the Next.js font system.
Header layout (logo · pill nav · support phone · “Login →”)	FOLLOW	Same structure. Added: EN/SW language switch. Login keeps the text-plus-arrow style with a gold underline.
Split-screen sign-in / sign-up	FOLLOW	Same grid, spacing, input and button shapes. Right panel uses an Encore illustration in gold / charcoal / grey.
Email | Phone sign-in tab	FOLLOW	Kept for customers. Phone-first suits the Tanzania, Zambia and DRC markets.
Phone with country selector, +255 default	FOLLOW	Also +260 (Zambia), +243 (DRC), +265, +250, +257. Phone is mandatory (SRS §5.3 allows email and/or mobile).
Account-type cards on sign-up	ADAPT	CargoLink offers 6 roles. Encore offers **2 selectable** (Cargo Owner, Transporter) plus 2 **locked** cards that explain invitation-only access (Driver, Affiliate). Staff never appear.
Glass cards on illustration	ADAPT	Recoloured: gold card, charcoal-grey card, frosted glass card. Copy is Encore's (verification, trust), not delivery-speed claims.
“Get Started →” pill CTA and giant hero type	ADAPT	Charcoal pill CTA; gold accent star; hero recoloured with gold-tinted glows instead of blue/pink.

Element	Decision	Encore treatment
Track Shipment in the menu	ADAPT	SRS §18.4 limits location data to authorised users, so Track opens a sign-in-gated page — no anonymous map.
Statistics (2,500+ transporters, 99% reliability …)	AVOID	Conflicts with SRS §35.2 (targets are not guaranteed outcomes). Use only audited, current numbers — or none.
Trust strip of regulators (LATRA, TRA, TPA …)	AVOID	Show Encore partner/association logos only with written permission and real membership.
Five service modes (CityXpress, Movers, InTransit, Warehouse)	AVOID	Not in the Encore SRS. Encore scope is cross-border road freight with verified transporters.
Pages Team, Careers, Investors, Blog, Case Studies, Cookies	AVOID	Not in SRS §7.1. Listed as optional future pages (Section 06.3). Cookie notice is still required for analytics consent.
3D images, wording, logo, text	AVOID	CargoLink's assets and copy are their property. Encore builds its own illustrations and copy; only the interaction pattern is followed.

LIMIT OF THIS BENCHMARK

The authenticated area `app.cargolink.tz` could not be opened from the analysis environment. Sign-in and sign-up behaviour (validation messages, OTP steps, post-login dashboard) was therefore specified from the client's screenshots and the SRS, not copied from the live flow.

04 Brand & Design System

One typeface, seven colours, one set of shapes. Everything below is designed so the website looks like Encore, feels as clean as CargoLink and passes accessibility contrast.

4.1 Logo

ENCORE
HOLDINGS GROUP

ENCORE HOLDINGS GROUP

Supplied with the SRS (cover page). Gold "e" roundel above the charcoal ENCORE wordmark and "HOLDINGS GROUP" line. The logo file is used as supplied.

USAGE RULES

- Clear space = height of the "E" on all sides
- Minimum width: 90 px (web), 25 mm (print)
- Place on white or charcoal only; on charcoal use the white badge version
- Never recolour, stretch, rotate or add effects

Request to client: supply the logo as SVG (and a reversed / white-wordmark version) for crisp rendering on dark backgrounds and at favicon size. The PNG extracted from the SRS is 401 × 238 px.

4.2 Colour palette

GOLD	CHARCOAL	WHITE	LIGHT GREY	MID GREY	DARK GREY	BLACK
#FFBC0D	#1D1D1B	#FFFFFF	#D1D3D4	#A7A9AC	#3D4348	#000000
rgb 255 188 13	rgb 29 29 27	rgb 255 255 255	rgb 209 211 212	rgb 167 169 172	rgb 61 67 72	rgb 0 0 0

Figure 4.1 — Encore brand palette as supplied by the client (SRS §6.9 confirms Gold #FFBC0D and Charcoal #1D1D1B).

COLOUR CODES TO CONFIRM

The list supplied contained three entries that are not valid hex codes, interpreted as follows. Please confirm.

- `#FFBCOD` — letter "O" typed instead of zero → **#FFBC0D** (matches SRS §6.9).
- `#FFFFFFF` — seven digits → **#FFFFFF**.
- `#FFBV0D` — "V" is not a hex digit; treated as a repeat of the gold → **#FFBC0D**. If this was meant to be a second, different colour, please send the correct code.

Colour	Token	Role on the website	Contrast
Gold #FFBC0D	`--gold`	Signature accent: highlight cards, badges, active indicators, star, underline of Login, selected states, secondary CTA. **Never use as text on white.**	Charcoal on gold 10.0:1 ✓ White on gold 1.7:1 × Gold on white 1.7:1 ×
Charcoal #1D1D1B	`--char`	Primary text, headings, primary buttons, footer background, dark hero cards.	On white 16.9:1 ✓ Gold on charcoal 10.0:1 ✓
White #FFFFFF	`--white`	Page and card backgrounds, text on charcoal / dark grey.	On charcoal 16.9:1 ✓
Dark grey #3D4348	`--g3`	Secondary text, nav links, dark glass card, secondary buttons, idle sign-in button.	On white 10.0:1 ✓ On light grey 6.7:1 ✓
Light grey #D1D3D4	`--g1`	Borders, dividers, nav-pill background (at 35% opacity), disabled fills, input outlines.	Decorative / non-text
Mid grey #A7A9AC	`--g2`	Placeholders, inactive icons, dashed guide lines. **Not for essential text** on white.	On white 2.4:1 × (text) On charcoal 7.2:1 ✓
Black #000000	`--black`	Reserved: logo wordmark detail and highest-contrast text on gold (12.5:1). Large fills use charcoal instead.	On gold 12.5:1 ✓

DERIVED TINTS AND FUNCTIONAL COLOURS (APPROVAL REQUESTED)

To keep the interface readable the build adds only: **gold tint** #FFF4D1 (selected cards, soft highlights), **grey tint** #F3F4F4 (alternating rows, tab trays), and two **functional colours** for form feedback — error #C62828 and success #2E7D32 — because validation states must be distinguishable and are not available in the brand palette. No other colours are introduced.

4.3 Typography — Outfit

Figure 4.2 — Outfit specimen and weight roles. Work Sans is optional for dense tables only.

Style	Desktop	Mobile	Use
Display	Outfit 800 · 96–128 px / 0.96 · −2%	56 / 1.0	Home hero only; last word italic 700
H1	Outfit 700 · 52 / 1.1	36 / 1.15	Page titles
H2	Outfit 700 · 38 / 1.15	28 / 1.2	Section titles
H3	Outfit 600 · 24 / 1.25	20 / 1.3	Card titles
Lead	Outfit 300 · 20 / 1.55	17 / 1.55	Intro paragraphs; bold keywords 600
Body	Outfit 400 · 16 / 1.6	16 / 1.6	Paragraphs, forms (min. 16 px to avoid mobile zoom)
Label	Outfit 600 · 12 · +14% caps	12	Eyebrows (“HOW IT WORKS”), “SUPPORT”
Button	Outfit 600 · 16–17 / 1	16	All buttons

4.4 Shape, spacing and effects

SHAPE

- Buttons, nav pill, chips: fully rounded (999 px)
- Inputs: 14 px radius, 56 px height
- Cards: 20–32 px; auth illustration panel 44 px

SPACING

- 4 px base unit
- Section rhythm 96 px desktop / 56 px mobile
- Container 1200 px; 16 px side gutter on phones

EFFECTS

- Soft shadow 0 8 30 rgba(29,29,27,.08)
- Glass: white 55%, blur 14 px
- Hero glows: gold and grey radial blurs

4.5 Header — the pattern to follow

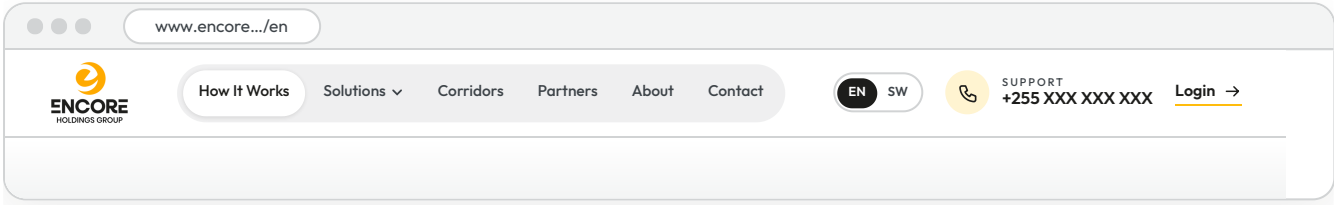

Figure 4.3 — Encore desktop header. Support number is a placeholder — Encore to supply the official line.

Part	Specification
Container	Height 88 px, white, 1 px bottom border #D1D3D4, sticky on scroll (shrinks to 72 px). Z-index above content; shadow appears after 8 px scroll.
Logo	Left, height 64 px (48 px when stuck). Links to Home in the current language.
Navigation pill	Centred tray, background #D1D3D4 at 35%, radius 999 px, 6 px padding. Links: How It Works · Solutions ▾ · Corridors · Partners · About · Contact, Outfit 500 · 15.5 px · #3D4348. Active/hover link becomes a white pill with charcoal text. “Solutions” opens a dropdown: For Cargo Owners · For Transporters · For Drivers. “Corridors” opens P7, “Partners” opens P8.
Language switch	EN | SW segmented control; selected side filled charcoal. Persists in a cookie and in the URL (`/en` , `/sw`).
Support phone	44 px circle (#FFF4D1) with phone icon; caption “SUPPORT” in 11 px caps; number Outfit 600 · 17 px. Tapping calls on mobile. A WhatsApp icon sits beside it on tablet widths.
Login →	Outfit 600 · 16 px, charcoal, arrow icon, 2 px gold underline. Hover: arrow moves 4 px right. Links to the Login page. (This is the CargoLink pattern the client liked.)
Get Started	Not in the header on desktop (kept for the hero, as on CargoLink). Visible as a gold pill in the mobile menu.
Mobile (< 1024 px)	Logo · language chip · hamburger. Full-screen menu slides down (300 ms) with large links, phone, Login and a gold “Get Started” pill.

4.6 Buttons, inputs and status chips

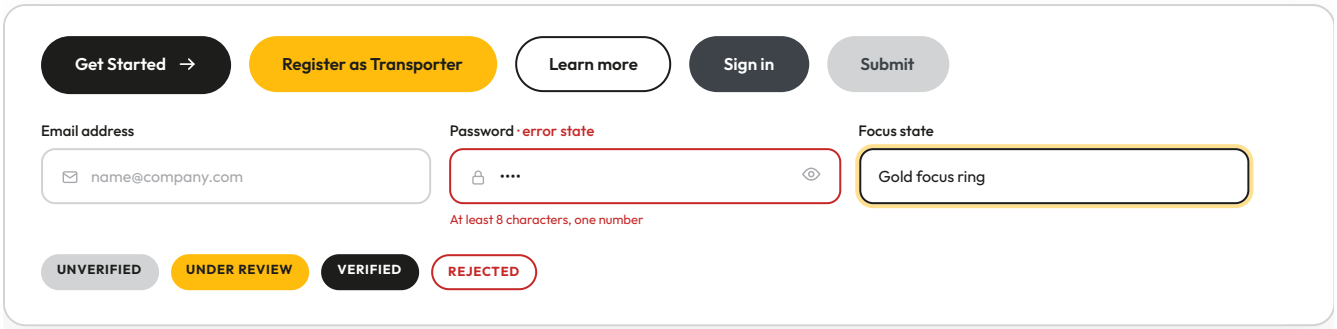

Figure 4.4 — Button hierarchy, input states and verification chips. "VERIFIED" is only rendered from a real status value (SRS §5.6).

4.7 Imagery and illustration

- **Hero and auth panels:** Encore-owned illustration in flat/3D-lite style using palette colours (gold cab, charcoal road, grey trailers) — see the sign-in/up mock-ups in Section 07.
- **Photography:** real trucks, depots and drivers on the Dar es Salaam–Lusaka–Lubumbashi corridors; only with usage rights. No stock images of unrelated places.
- **Icons:** 24 px outline set, 1.8 px stroke, charcoal; gold fill only for the active state.
- **Motion:** 200–300 ms ease-out; respects `prefers-reduced-motion`.

05 Site Architecture & Sitemap

The 14 pages of SRS §7.1, grouped by audience, plus the system pages every professional site needs. Public pages are open to everyone; the private platform begins after sign-in.

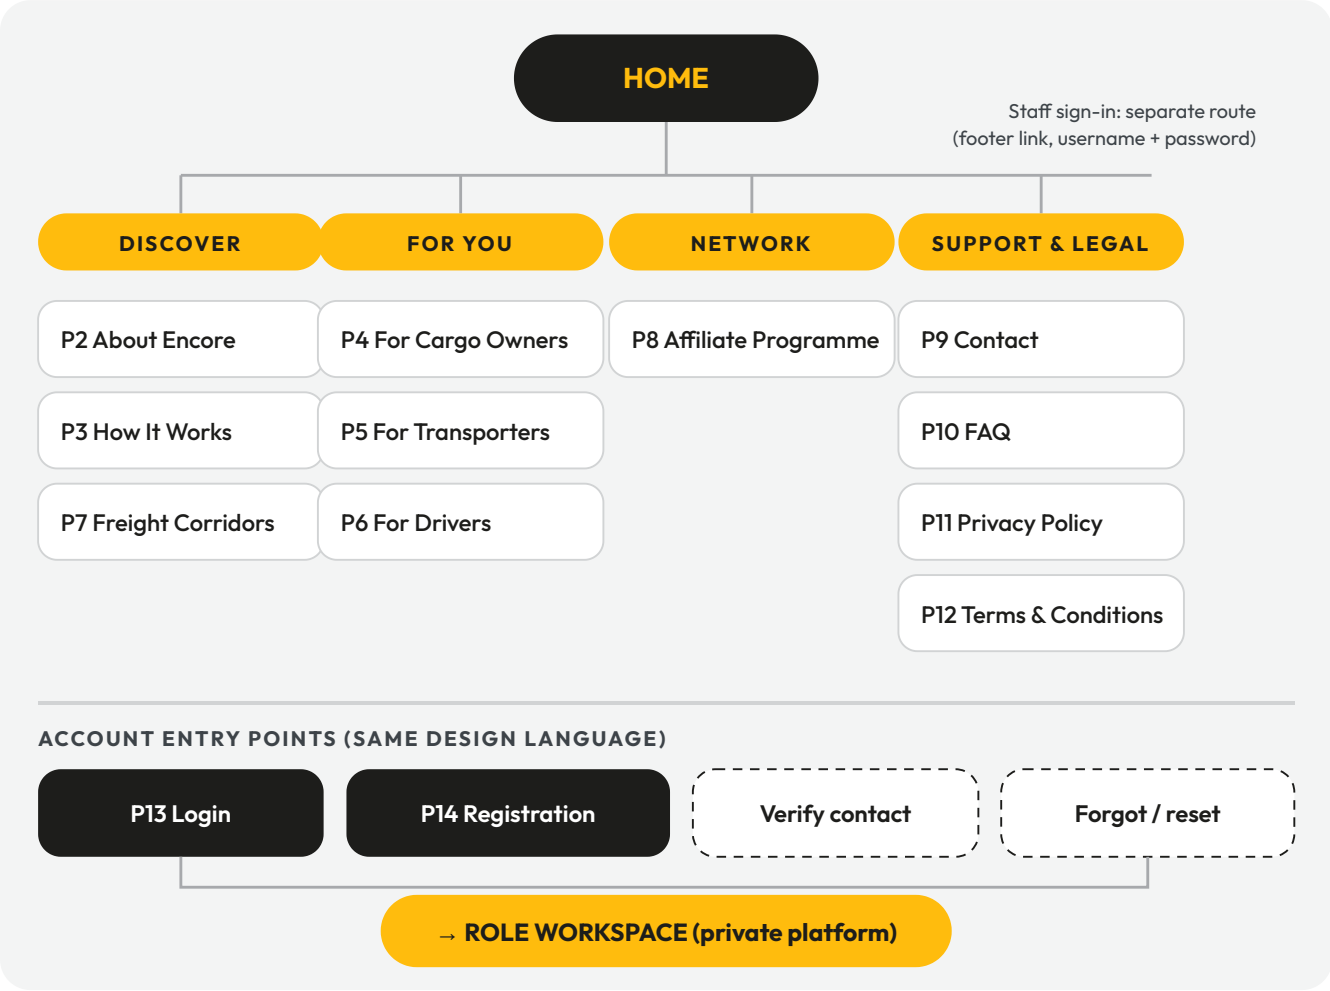

Figure 5.1 — Public sitemap. P2–P14 map one-to-one to SRS §7.1 (Home = P1). Dashed boxes are supporting screens of the auth flow.

5.1 Page inventory and priority

ID	Page	URL (EN / SW)	Main audience	Priority
P1	Home	`/en` · `/sw`	Everyone	MUST
P2	About Encore	`/about` · `/kuhusu`	Buyers, partners, regulators	MUST
P3	How It Works	`/how-it-works` · `/jinsi-inavyofanya-kazi`	Cargo owners, transporters	MUST

ID	Page	URL (EN / SW)	Main audience	Priority
P4	For Cargo Owners	/cargo-owners · /wenye-mizigo	Shippers, importers, exporters	MUST
P5	For Transporters	/transporters · /wasafirishaji	Fleet owners, truck owners	MUST

5.2 Global components on every page

HEADER & FOOTER

- Header per Section 4.5
- Footer: logo, tagline, 4 link columns, contact, languages, legal, staff link
- Newsletter / updates (consent-based)

ASSISTANCE

- AI Assistant bubble (bottom-right)
- WhatsApp click-to-chat
- “Talk to a person” hand-off

COMPLIANCE

- Cookie / analytics consent banner
- Language switch EN / SW
- Breadcrumbs on inner pages

06 Page Specifications (P1 – P12)

Each page lists its purpose, sections in order, key content, calls to action and the SRS clauses it satisfies. Section copy is indicative; final wording is approved by Encore.

P1 · Home

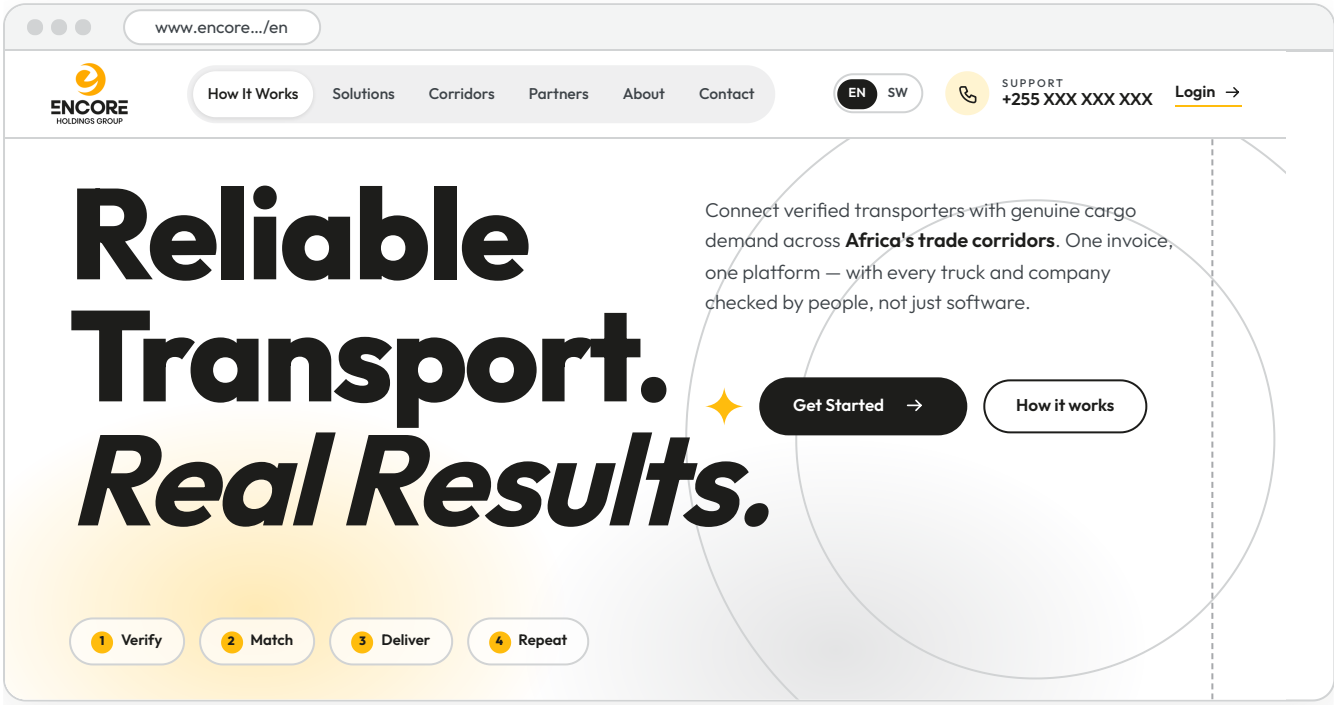

Figure 6.1 — Home hero (desktop). Headline uses the brand motto; the italic final word follows the CargoLink display pattern; the VERIFY → MATCH → DELIVER → REPEAT cycle sits under the hero.

#	Section	Content and behaviour
1	**Hero**	Headline "Reliable Transport. Real Results.", 2-line value statement, primary CTA **Get Started** (→ Registration), secondary CTA **How it works**. Gold star accent, gold/grey glows, cycle chips VERIFY · MATCH · DELIVER · REPEAT.
2	**Audience selector**	Four cards — **Cargo Owner**, **Transporter**, **Driver**, **Partner** — each with one-line promise and a button to its page (P4, P5, P6, P8).
3	**How it works (6 stages)**	REQUEST → MATCH → QUOTE → APPROVE → TRACK → CLOSE as a horizontal stepper with icons; link to P3.
4	**Why Encore (trust pillars)**	4 pillars from SRS §2.3: **Verified network** (human-reviewed documents) · **Transparent quotations** · **One invoice, one payment** · **Shipment visibility** (GPS where compatible, driver reports otherwise). No unverified claims.
5	**Freight corridors teaser**	Map-style graphic with Dar es Salaam → Lusaka and → Lubumbashi; status labels Pilot / Expanding; link to P7.

#	Section	Content and behaviour
6	**Verification explained**	Short statuses explainer: Registered → Under Review → Verified. “Registration does not mean verification.”
7	**Partner invitation strip**	“Know a business that ships? Join our affiliate programme” → P8 (invitation request).
8	**Final CTA band**	Charcoal band, gold button: **Create your account** and **Talk to us on WhatsApp**.
9	**Footer**	Per Section 5.2.

SRS: §1, §2.1–2.4, §5.6, §7.2, §17. **Optional (needs real data):** verified-capacity counters showing “verified transporters / verified trucks” read from the database, shown only when numbers are meaningful (SRS §35.2).

P2 · About Encore

- **Story & purpose:** who Encore Holdings Group is (text from Encore).
- **Vision** and **Mission** (SRS §2.1–2.2, verbatim after approval).
- **Operating principle:** “Verify → Match → Deliver → Repeat”; “Grow Slow. Grow Sure.”
- **13 strategic objectives** condensed into 6 plain-language commitments.
- **Accountability promise:** “Automation increases trust, not replaces accountability.”
- **Where we operate:** Tanzania, Zambia, DRC; planned Malawi, Rwanda, Burundi.
- **Leadership & contact details** — only if Encore provides them.

CTA: Contact us · Create account. **SRS:** §2, §46.

P3 · How It Works

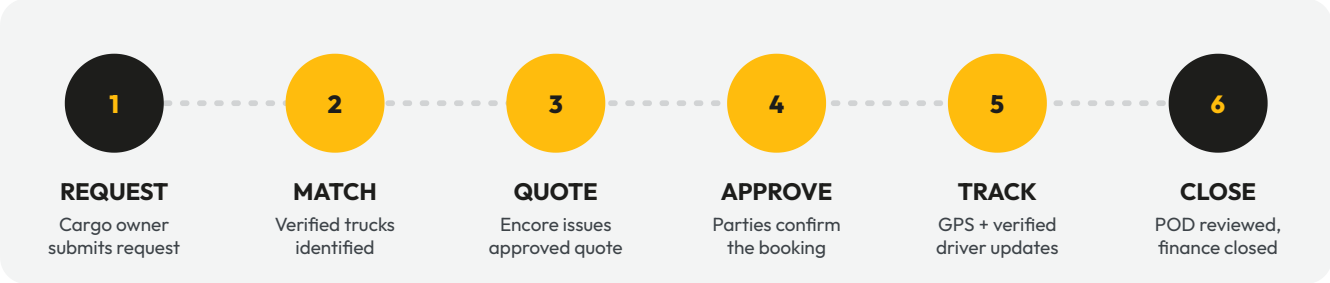

Figure 6.2 — Shipment lifecycle (SRS §17.1) as shown on P3.

#	Section	Content
1	**Overview**	Lifecycle stepper above with a short paragraph per stage (SRS §17.1).
2	**Split view**	Tabs “I have cargo” / “I have trucks” showing the journey from each side (SRS §33.2, §33.3).
3	**Verification**	How documents are reviewed: upload → AI-assisted extraction → human decision → approval; “AI never approves” (SRS §11.3–11.4).

#	Section	Content
4	**Matching & quotation**	Criteria (route, truck category, capacity, availability, verification, permits, performance); staff review before booking; no auto-confirmation (SRS §14).
5	**Payments**	"One invoice, one payment to Encore" — customer is not asked to split payment; Encore settles the transporter (SRS §1.1, §20.1). Payment methods listed only once Finance approves.
6	**Tracking**	GPS where compatible; otherwise driver-reported milestones clearly labelled; proof of delivery (SRS §17.4, §18).
7	**CTA**	Register as Cargo Owner · Register as Transporter.

P4 · For Cargo Owners

- **Promise:** "Move cargo with verified transporters and clear records."
- **What you get:** request cargo transport, receive quotations, confirm bookings, follow shipments, see invoices and payment status, contact support (SRS §5.4.9, §12.3).
- **What to prepare for a request:** cargo description and category, weight, volume, truck type, loading location, destination, pickup date, special handling, attachments (SRS §13.1).
- **Request statuses** explained: Submitted → Under Review → Matching → Quotation Sent → Booked.
- **Verification & trust:** only verified trucks are matched (SRS §14.2, §38 #11).
- **Invoice model:** one official invoice from Encore (SRS §20).
- **Onboarding:** Registration → Contact verification → Profile completion → Activation → Cargo request (SRS §33.3).

CTAs: Register as Cargo Owner · Ask a question. **Also:** mini FAQ and corridor shortcut.

P5 · For Transporters

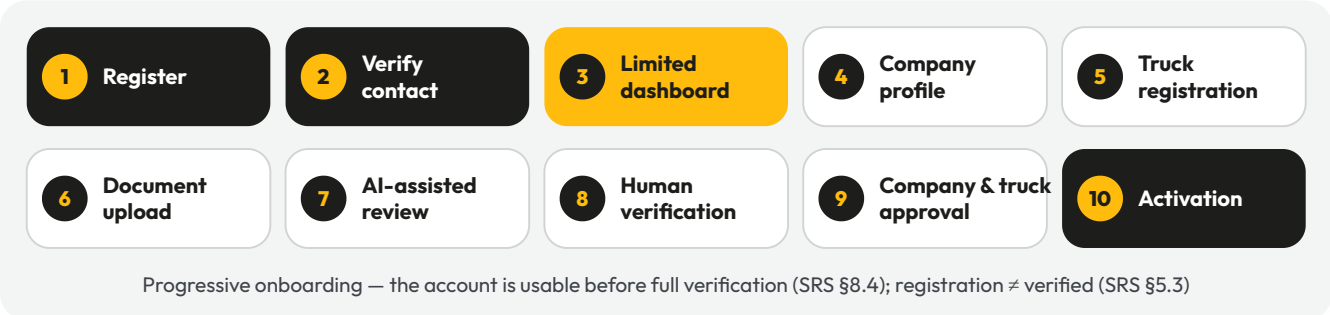

Figure 6.3 — Transporter onboarding in 10 steps (SRS §8.4, §33.2).

- **Promise:** "Reach verified cargo demand on trade corridors — without guaranteed volumes."
- **Who can join:** transport companies, fleet owners; company roles (owner, administrator, fleet manager, dispatcher).
- **What you manage:** company profile, fleet, drivers, documents, routes, availability, quotations, bookings, shipments (SRS §5.4.8).
- **Documents checklist (configurable by country):** company registration certificate, business licence, vehicle registration cards, insurance, road permits, driver licences, identity documents (SRS §11.1).
- **Truck data:** registration number, category, make/model, year, load capacity, body type, axles, insurance, permits, routes (SRS §9.1).

- **Fleet dashboard preview:** total / verified / awaiting-verification / assigned / available trucks, expiring documents.
- **Settlement:** Encore controls transporter payments per written agreement (SRS §20.7) — no universal percentage promised.
- **Security:** documents stored privately; never shown publicly.

CTAs: Register as Transporter · Download document checklist (PDF) · WhatsApp us.

P6 · For Drivers

- **How a driver joins:** drivers are **invited and linked to an approved transport company** (SRS §5.1, §10) — there is no public driver sign-up.
- **What a driver does:** see assigned trips, pickup/delivery information, route and checkpoint instructions, send milestone updates, report incidents, submit proof of delivery (SRS §10.2).
- **Daily progress report** with a configurable deadline (proposed 16:00 EAT, subject to Encore approval; SRS §10.3).
- **What you need:** valid driving licence, identity document, assignment from your company.
- **Privacy:** drivers only see assigned operational information.

CTAs: Log in (existing drivers) · "Ask your transport company to invite you" · Contact support. A phone-friendly layout is essential because most drivers will use smartphones.

P7 · Freight Corridors

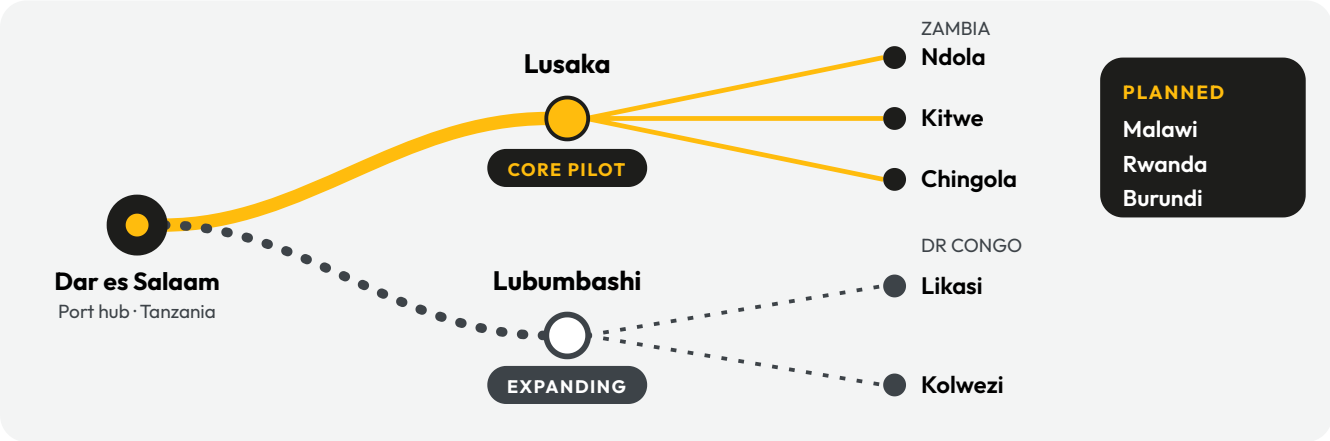

Figure 6.4 — Corridor graphic for P7 (SRS §24.2). Zambia is the core pilot; DRC expands only when verified capacity exists.

Corridor card	Routes shown	Status label
Tanzania → Zambia	Dar es Salaam to Lusaka, Ndola, Kitwe, Chingola	CORE PILOT
Tanzania → DRC	Dar es Salaam to Lubumbashi, Likasi, Kolwezi	EXPANDING
Malawi · Rwanda · Burundi	Regional roadmap (no routes advertised)	PLANNED

- Each card: countries, route list, typical documents needed, how to register for that corridor, “Request capacity / Offer trucks” buttons (lead form with corridor pre-filled).
- **Border note (mandatory):** border information shown elsewhere in the platform is estimated or partner-supplied and is not official government confirmation (SRS §24.4).
- Country activation depends on verified demand, legal readiness, capacity and operations (SRS §24.3) — status labels are controlled from the admin system (`system_settings`), not hard-coded.

P8 · Affiliate Programme

- **Who it is for:** freight agents, logistics brokers, trade consultants, sales professionals, trusted industry contacts (SRS §21.3).
- **Two partner types:** Referral Affiliate (introduces qualified cargo owners) and Logistics Broker / Business Development Partner (SRS §21.2).
- **Invitation-only at launch:** form “Request an invitation” → lead for Encore staff; partner approval workflow (8 steps, SRS §21.4).
- **How rewards work (high level):** only on completed, reconciled, verified business — never for sign-ups alone (SRS §21.10).
- **Tier names** Starter / Growth / Premier may be shown; percentages 10 / 15 / 20 are **hidden until approved** (SRS §21.7, §42.1-E).
- **Anti-fraud notice:** identity checks, no self-referral, duplicate detection.
- **Referral links:** `/register?ref=CODE` pre-fills the referral-code field (SRS §21.6).

P9 · Contact

CONTACT FORM (WRITES A LEAD OR TICKET)

Fields	Full name · Company · Email · Phone (country code) · Country · I am a (Cargo owner / Transporter / Driver / Partner / Other) · Corridor of interest · Message
Consent	Privacy consent checkbox (required); optional WhatsApp / email updates
Protection	Invisible bot check, rate limit, server-side validation
After submit	Confirmation screen with reference number; automatic email acknowledgement

OTHER CONTACT CHANNELS

- Support phone and WhatsApp number (Encore to supply)
- Email address and office address(es) per country
- Business hours and expected response time
- Social links (only official accounts)
- Map embed (optional, privacy-friendly)

SRS: §25.2 (lead fields), §25.3 (source = website forms), §26.1 (support tickets).

P10 · FAQ

Group	Questions answered (initial set)
Getting started	Who can register? Why can't drivers or affiliates sign up directly? How long does verification take? What does "Limited dashboard" mean?
Verification	What do Unverified / Under Review / Verified / Rejected / Expired mean? Which documents are needed? Does AI approve my documents? (No — people decide.)
Cargo owners	How do I request transport? How are quotations prepared? Can Encore guarantee a truck? (No.) What happens when a shipment is delayed?
Transporters	What is expected from my fleet? How do I add trucks and drivers? How are settlements calculated and paid?
Payments	Who do I pay? (Encore, one invoice.) Which methods are accepted? What if I pay by mobile money or bank transfer?
Tracking	How is my cargo tracked? What does "driver-reported" mean? Who can see location data? (Authorised users only.)
Corridors	Which routes are live? Are Malawi, Rwanda and Burundi available?
Privacy & security	How are my documents protected? How do I request data access or deletion?

FAQ content comes from one approved knowledge base that also feeds the AI Assistant (SRS §22.3, §32.3), so answers never contradict each other. Accordion layout with search and deep-link anchors.

P11 · Privacy Policy & P12 · Terms and Conditions

> **LEGAL REVIEW REQUIRED**
>
> Both pages are drafted from the SRS only as outlines. Final text must be reviewed by Encore's legal adviser for each operating country. Acceptance of both documents is recorded at registration with a timestamp and version number.

PRIVACY POLICY MUST COVER (SRS §30.5)

- Personal data collected and why (purpose limitation)
- Data minimisation and document retention periods
- Data-access, correction and deletion requests
- Data sharing with approved providers (AI, WhatsApp, maps, payments)
- Cross-border processing
- Incident response, backup and recovery
- Cookies, analytics and consent
- Country-specific requirements (TZ, ZM, DRC)

TERMS AND CONDITIONS MUST COVER

- Account types, registration ≠ verification
- Role responsibilities and acceptable use
- Marketplace role of Encore; no guaranteed cargo or earnings (SRS §3.2)
- Quotation, booking, cancellation and dispute principles (to be confirmed, SRS §42.2)
- Central invoicing and payment collection
- Liability limits, governing law and jurisdiction
- Affiliate / broker programme terms by separate agreement

07 Sign-in & Sign-up Experience (P13, P14)

The client asked for the CargoLink screen pattern for visitors who are allowed to register. This section specifies it in Encore's brand and adapts the role choice to what the SRS permits.

7.1 Who may do what — access rules

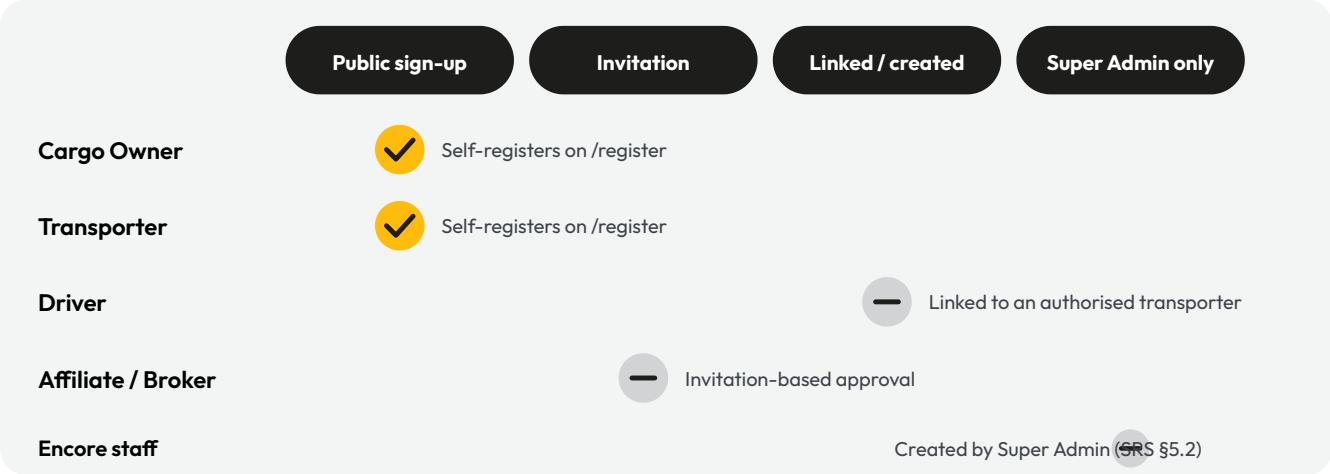

Figure 7.1 — SRS §5.1 access model. The public Registration page therefore shows **two active role cards** and explains the others.

7.2 Sign-in screen (P13)

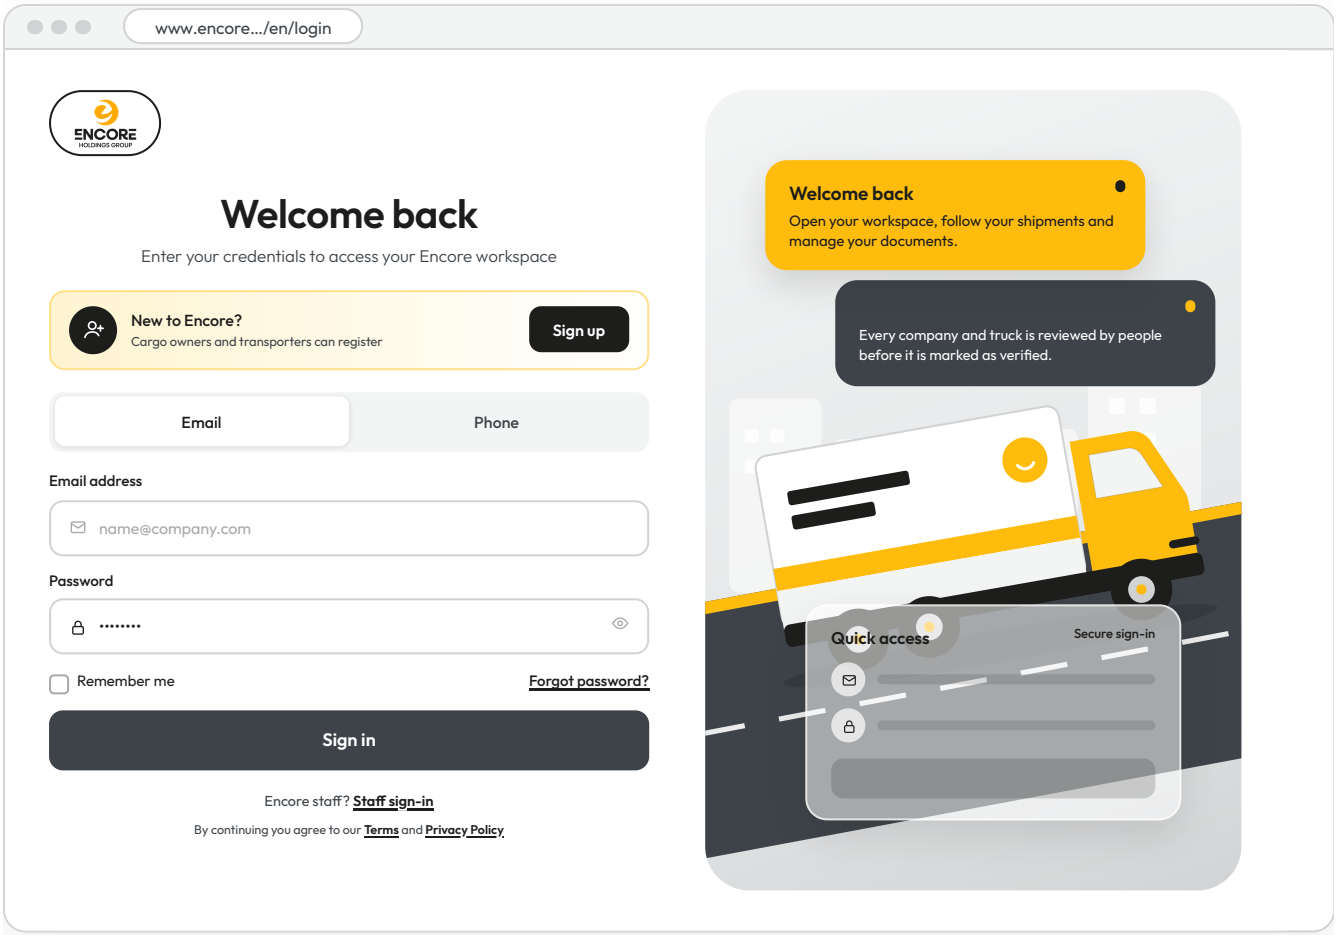

Figure 7.2 — Encore sign-in screen (desktop). Same split layout, input shapes and tab as CargoLink; brand colours, gold glass card and Encore illustration replace theirs.

ID	Element	Behaviour
LG-01	**Layout**	Two columns on ≥ 1024 px: form 600 px + illustration panel (radius 44 px). Below 1024 px the illustration is hidden and the form is full width with a gold top band.
LG-02	**"New to Encore?" box**	Gold-tint gradient box above the form with **Sign up** button → P14. Text clarifies who can register (cargo owners and transporters).
LG-03	**Email | Phone tab**	Segmented control remembers the last choice. Phone tab shows country selector (+255 default) and requests the password, or sends a one-time code if the account uses phone verification.
LG-04	**Fields**	Email or phone; password with show/hide. Autofill and password-manager friendly (`autocomplete` attributes). Paste is allowed.
LG-05	**Remember me / Forgot password**	Remember me extends the session; forgot password sends a time-limited reset link or code (SRS §30.1 secure recovery).
LG-06	**Sign-in button**	Dark grey (#3D4348) while empty; charcoal when both fields are valid; spinner while submitting; never disabled silently.

ID	Element	Behaviour
LG-07	**Errors**	Neutral message “Email/phone or password is incorrect” (no account enumeration). After repeated failures: temporary lock and rate limiting; event written to audit log (SRS §30.1, §30.4).
LG-08	**Account state messages**	**Pending Contact Verification** → resend code screen. **Limited** → proceed to limited dashboard. **Suspended** → contact-support message. (Statuses per SRS §5.6.)
LG-09	**Post-login routing**	Role-based redirect to the user's workspace: Cargo Owner, Transporter, Driver or Affiliate portal (SRS §4.3). Safe return to the page the user was visiting.
LG-10	**MFA**	Privileged accounts (admin, finance) are challenged for a second factor per the approved security policy (SRS §5.2, §30.1).
LG-11	**Staff sign-in (S1)**	Separate route and screen with **Username** + password (no email tab, no “Sign up”). Linked discreetly from the footer. First login forces password change (SRS §5.2).

7.3 Registration screen (P14)

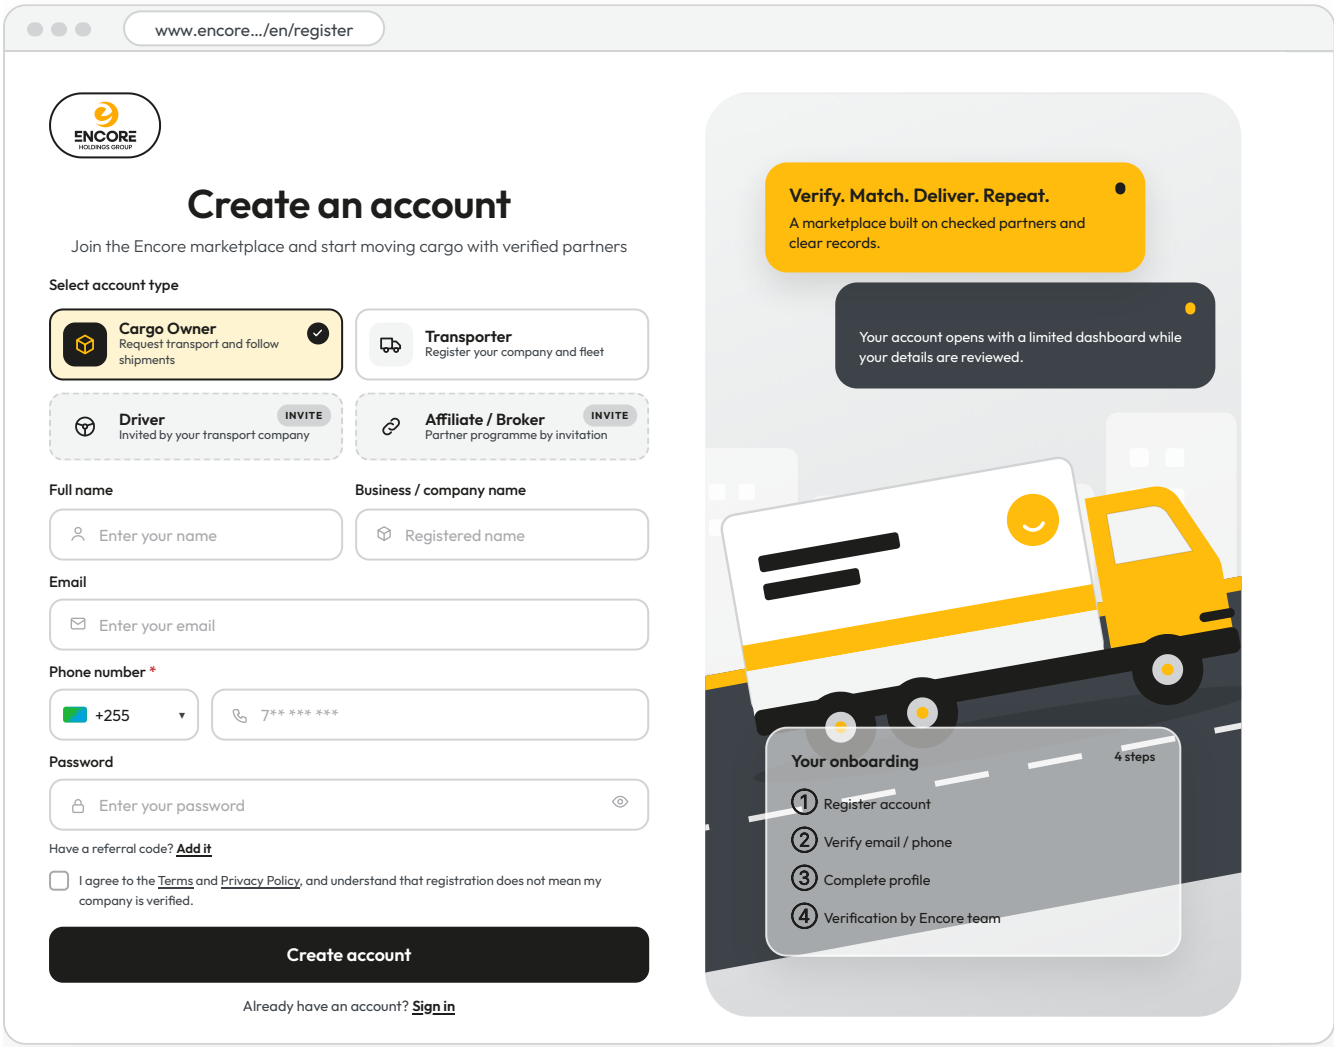

Figure 7.3 — Encore registration screen (desktop). The CargoLink account-type cards become 2 active + 2 invitation cards; the phone field keeps the flag + country code pattern.

ID	Field / element	Rule	Validation and notes (SRS §5.3, §8.2, §12.2, §21.6)
RG-01	**Account type**	Required	Two selectable cards: **Cargo Owner**, **Transporter**. Driver and Affiliate/Broker cards are non-selectable (dashed, "INVITE" badge) and open a short explainer: drivers join via their transport company; affiliates via invitation ("Request an invitation" → lead form). No staff option exists.
RG-02	**Full name**	Required	2–80 characters, letters, spaces, hyphens, apostrophes; trims whitespace.
RG-03	**Business / company name**	Required for Transporter; optional for Cargo Owner	Cargo owners may register as an individual or company (SRS §12.2). Registration number, country and licences are completed later in the profile, not on this screen.
RG-04	**Email**	Required	RFC-valid, lower-cased, unique; verification link or code sent after submit. (SRS allows "email and/or mobile"; Encore requires both to support WhatsApp and recovery.)
RG-05	**Phone number**	Required	Flag + dial-code dropdown: +255 TZ (default), +260 ZM, +243 CD, +265 MW, +250 RW, +257 BI, others searchable; E.164 normalisation; numeric only; unique.
RG-06	**Password**	Required	Minimum 8 characters with strength meter; show/hide eye; blocks common passwords; stored hashed (SRS §30.1) — never emailed or displayed.
RG-07	**Referral code**	Optional	Collapsed link "Have a referral code?". Pre-filled from `?ref=CODE` and kept in a first-party cookie for 60 days (SRS §21.6); validated server-side; self-referral blocked (SRS §21.12).
RG-08	**Terms and privacy**	Required	Unticked checkbox; links open in a new tab; records document version and timestamp (SRS §5.3 step 6).
RG-09	**Communication consent**	Optional	Opt-in for WhatsApp and email updates; transactional messages remain mandatory (SRS §23.4).
RG-10	**Create account button**	—	Charcoal, full width; spinner; double-submit protection; invisible bot check and rate limit per IP/device.
RG-11	**Existing user**	—	If email or phone already exists: generic prompt "Looks like you may already have an account — sign in or reset password".

7.4 After submit — what the user sees

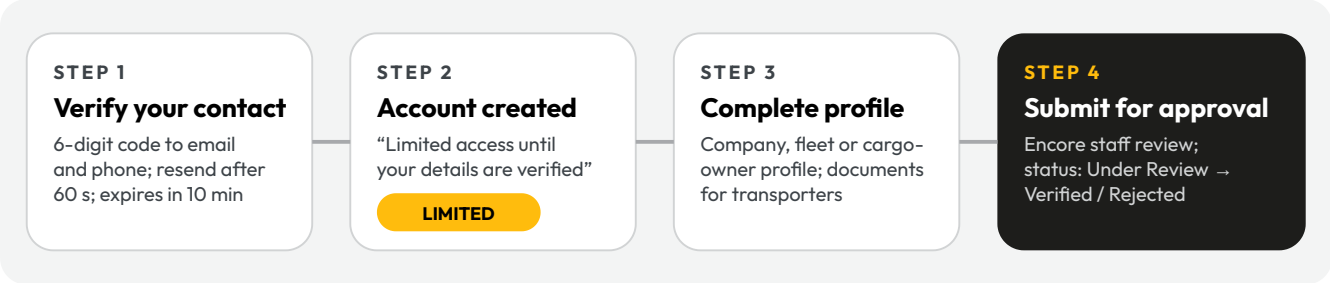

Figure 7.4 — Post-registration sequence (SRS §5.3 steps 5–9). The words “Verified” and “Approved” never appear until a human decision exists (SRS §5.6, §11.4).

7.5 End-to-end onboarding journeys (public entry → active user)

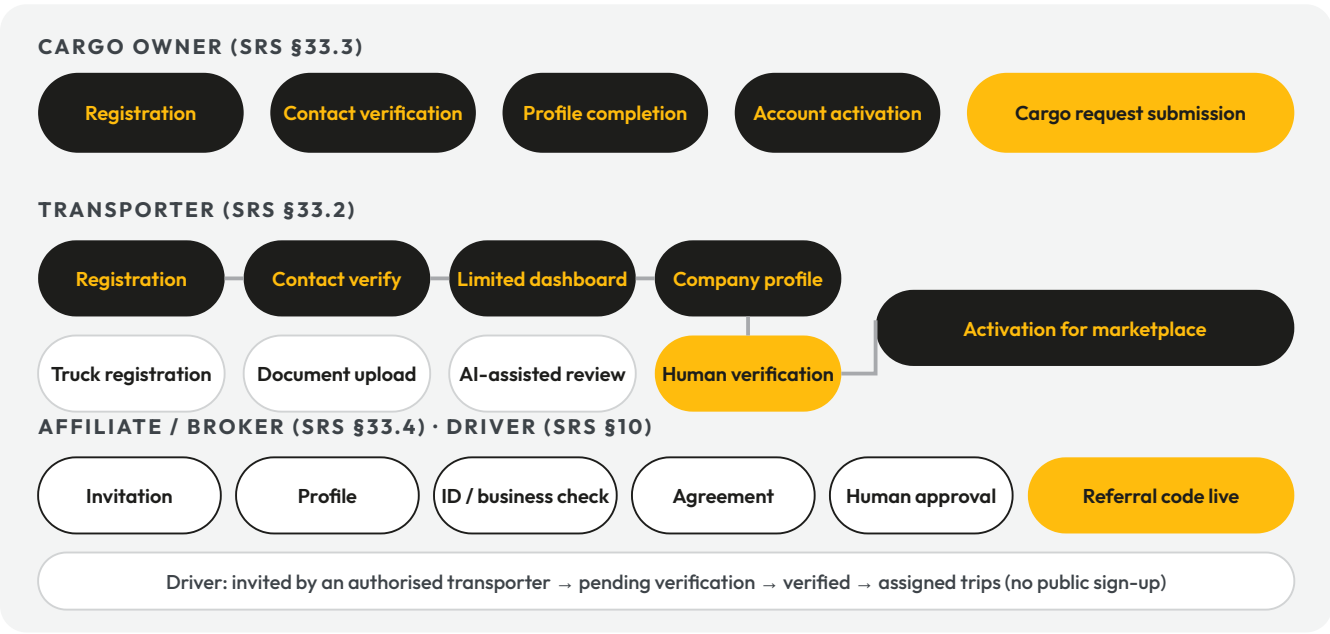

Figure 7.5 — Journeys that begin on the public website. Dark pills are visitor-driven steps; the gold pill is the outcome.

08 Functional Requirements

Numbered, testable requirements for the public website. Priority: MUST required for launch · SHOULD expected for launch if capacity allows · COULD later release.

8.1 Global, navigation and branding

ID	Requirement	Priority	SRS
WEB-001	The site shall implement the 14 pages of SRS §7.1 plus S1–S4 (staff sign-in, tracking gate, verification/reset screens, error pages).	MUST	§7.1
WEB-002	All pages shall use Outfit and the supplied colour palette; tokens defined once and reused (colour, type, spacing, radius).	MUST	§6.9
WEB-003	The sticky header shall follow Section 4.5 (logo, pill navigation, language switch, support phone, Login →) and collapse to a mobile menu below 1024 px.	MUST	§7.2
WEB-004	The footer shall provide About, Solutions, Network, Support and Legal links, contact details, language switch, newsletter opt-in and the tagline “Reliable Transport. Real Results.”	MUST	§46
WEB-005	Every page shall present a clear primary call to action (Register, Contact or Learn more) above the fold.	MUST	§7.2
WEB-006	The site shall be fully responsive for desktop, laptop, tablet and smartphone (breakpoints 360 / 768 / 1024 / 1280 / 1536 px) with touch targets ≥ 44 px.	MUST	§31.5
WEB-007	Light theme at launch; design tokens shall be structured so a dark theme matching the platform (Light / Dark / System, SRS §6.9) can be added without redesign.	SHOULD	§6.9
WEB-008	Page transitions, accordions and menus shall animate within 200–300 ms and respect reduced-motion settings.	SHOULD	§31.4

8.2 Content, corridors and trust information

ID	Requirement	Priority	SRS
WEB-010	The site shall explain the lifecycle REQUEST → MATCH → QUOTE → APPROVE → TRACK → CLOSE on Home and How It Works.	MUST	§17.1
WEB-011	The site shall present country and corridor information for Tanzania–Zambia and Tanzania–DRC with status labels (Core pilot / Expanding / Planned) read from configuration.	MUST	§24, §7.2
WEB-012	The site shall show approved trust and verification information (verification statuses, human review, document protection) and shall never show an unverified company or truck as verified.	MUST	§5.6, §7.2

ID	Requirement	Priority	SRS
WEB-013	The site shall not publish commission rates, minimum fees, affiliate percentages or unapproved prices.	MUST	§19, §42
WEB-014	The site shall not state or imply guaranteed cargo availability, guaranteed earnings, delivery guarantees or unaudited performance figures.	MUST	§3.2, §35.2
WEB-015	Public pages shall never expose private truck documents, identity documents or confidential user records, and shall not link to private storage.	MUST	§7.2, §38 #9
WEB-016	Border-related statements shall carry the note that estimated or partner-supplied border information is not official government confirmation.	MUST	§24.4
WEB-017	The Transporter page shall publish a configurable “documents you will need” checklist per country, downloadable as PDF.	SHOULD	§11.1
WEB-018	Public counters (e.g. verified transporters, verified trucks) may be shown only if read live from approved data and above a minimum threshold set by Encore.	COULD	§35.2

8.3 Registration, login and accounts

ID	Requirement	Priority	SRS
WEB-020	The Registration page shall allow only Cargo Owners and Transporters to self-register; Drivers, Affiliates/Brokers and staff shall have no public registration.	MUST	§5.1, §38 #2 #4 #6 #7
WEB-021	Registration shall collect account type, name, business name (as applicable), email, mobile number, password, terms/privacy acceptance and optional referral code, as specified in RG-01 … RG-11.	MUST	§5.3
WEB-022	The system shall verify the user's contact details (email and phone) before granting access to the limited dashboard.	MUST	§5.3, §32.1
WEB-023	After registration the user shall see a clear “account created — verification pending” state; the interface shall not describe the account, company or truck as verified.	MUST	§5.3, §5.6
WEB-024	Login shall support email or phone with password, remember-me, forgot-password, session management and secure logout.	MUST	§30.1
WEB-025	Login shall rate-limit and lock after repeated failures, return non-enumerating error messages and log events.	MUST	§30.1, §30.4
WEB-026	After login the user shall be redirected to the workspace for their role; unauthorised routes shall be blocked on the server (not only hidden in the interface).	MUST	§4.3, §30.2
WEB-027	A separate staff sign-in (username + password, first-login reset, MFA for privileged roles) shall exist and shall offer no sign-up option.	MUST	§5.2
WEB-028	Referral links (`?ref=CODE`) shall be captured, stored for 60 days and attached to the new account for attribution (validated server-side).	SHOULD	§21.6

ID	Requirement	Priority	SRS
WEB-029	Registration shall record the accepted Terms / Privacy version and timestamp, and communication consent choices.	MUST	§23.4, §30.5

8.4 Forms, leads and support

ID	Requirement	Priority	SRS
WEB-030	Contact and inquiry forms shall create a lead (`marketing_leads`) or support ticket with name/company, contact, country, business category, source “website form”, UTM parameters, corridor of interest and timestamp.	MUST	§25.2–25.3, §26
WEB-031	“Request an invitation” forms on Affiliate and Driver pages shall create partner or driver leads routed to authorised staff.	MUST	§21.4
WEB-032	Forms shall validate on client and server, show inline errors, include bot protection and rate limiting, and confirm with a reference number.	MUST	§30.3
WEB-033	Form submission shall trigger an acknowledgement email and notify the assigned team via the central notification engine.	SHOULD	§28
WEB-034	A WhatsApp click-to-chat button shall open Encore's approved WhatsApp Business number with a pre-filled, language-aware message.	MUST	§23, §32.2

8.5 AI Assistant, languages and SEO

ID	Requirement	Priority	SRS
WEB-040	The public AI Assistant shall answer in English and Swahili: explain Encore, guide registration, explain onboarding requirements and verification statuses, answer approved FAQs and direct users to human support.	SHOULD	§22.1–22.3
WEB-041	The assistant shall disclose that it is automated, use only the approved knowledge base, and shall not approve verification, promise cargo or income, invent shipment data, expose private records or give legal decisions.	MUST	§22.5
WEB-042	Uncertain, legal, fraud, payment-dispute and incident questions shall be escalated to a human via Contact / WhatsApp and recorded in `ai_conversations` .	MUST	§22.5
WEB-043	Only necessary, non-sensitive text shall be sent to approved AI providers; no documents or personal identity data from public visitors.	MUST	§22.6
WEB-044	All pages shall be available in English and Swahili with a persistent language switch, localised URLs and `hreflang` tags; the structure shall allow French to be added later.	MUST	§22.2
WEB-045	The site shall be search-engine-friendly: server-rendered pages, unique titles/descriptions, Open Graph cards, `sitemap.xml` , `robots.txt` , canonical URLs and structured data (Organization, FAQPage).	MUST	§7.2

ID	Requirement	Priority	SRS
WEB-046	Analytics shall be integrated only after user consent and shall exclude personal data and private pages.	MUST	§7.2, §30.5

8.6 Content management and administration

ID	Requirement	Priority	SRS
WEB-050	Corridor status labels, FAQ entries, document checklists and public contact details shall be editable by authorised staff without code changes.	SHOULD	§24.3, §29
WEB-051	Content edits shall be role-controlled and recorded in the audit log (actor, record, time).	SHOULD	§30.4
WEB-052	Newly submitted leads and registrations shall appear in the staff notification centre.	SHOULD	§6.7

09 Content, Messaging & Guardrails

Words are part of the product. This section sets the tone, the approved vocabulary in English and Swahili, and the statements the website must never make.

9.1 Voice

RELIABLE
Plain, confident, specific. "Every truck is reviewed by our team before it is verified."

HONEST
No hype, no guarantees, no invented numbers. Say what Encore does and what it does not.

HUMAN
Short sentences, everyday words, Swahili that real customers speak. People are accountable, software assists.

9.2 Core vocabulary (EN → SW)

English	Kiswahili (draft)	Definition / usage note
Reliable Transport. Real Results.	Usafirishaji wa Kuaminika. Matokeo ya Kweli.	Brand line (SRS §46)
Grow Slow. Grow Sure.	Kua Polepole. Kua kwa Uhakika.	Sign-off line
Verify · Match · Deliver · Repeat	Thibitisha · Linganisha · Fikisha · Rudia	Operating cycle (SRS §2.4)
Cargo Owner	Mwenye Mzigo	Person or business that needs goods moved
Transporter	Msafirishaji	Company or owner of trucks
Driver	Dereva	Linked to a transporter; no public sign-up
Affiliate / Broker	Mshirika / Dalali wa Usafirishaji	Invitation-based partner
Verified / Under Review / Unverified	Imethibitishwa / Inakaguliwa / Haijathibitishwa	Only from real status values
Quotation	Nukuu ya Bei	Prepared and approved by Encore
Proof of Delivery (POD)	Uthibitisho wa Kufikisha Mzigo	Reviewed before the shipment is closed
Get Started · Login · Sign up	Anza Sasa · Ingia · Jisajili	Primary actions
Welcome back	Karibu tena	Sign-in headline

English	Kiswahili (draft)	Definition / usage note
Registration does not mean verification.	Kujisajili hakumaanishi kuthibitishwa.	Required on sign-up and in FAQ

Swahili is a working draft for layout and review. A professional Swahili translator must approve all public copy before launch.

9.3 Never say — always say

Avoid	Use instead	Why
“Guaranteed loads / guaranteed income for transporters”	“Access verified cargo demand on trade corridors.”	§3.2
“99% delivery reliability”, “thousands of businesses”	Only audited figures, or describe the process (“every truck reviewed by our team”).	§35.2
“Instant booking”, “AI-approved transporters”	“Matched from verified trucks and reviewed by Encore staff.”	§14.4, §11.4
“Our 5% commission”, “USD 300 minimum”, “earn 20%”	“Transparent quotations” without numbers, until Encore approves publication.	§19, §42.1
“Pay the driver / pay the transporter directly”	“You receive one official invoice from Encore and pay Encore.”	§1.1, §20.1
“Real-time tracking of every shipment”	“Shipment visibility through compatible GPS and verified driver updates.”	§18
“Official border status”	“Border updates from authorised partner feeds, where available. Not official government confirmation.”	§24.4
“You are verified!” (after sign-up)	“Account created. We are reviewing your details.”	§5.3, §5.6
Anyone can be a driver / affiliate on the site	“Drivers join through their transport company. Partners join by invitation.”	§5.1

9.4 Draft key messages (for approval)

Where	English	Kiswahili
Hero value statement	Connect verified transporters with genuine cargo demand across Africa's trade corridors — with every company and truck checked by people.	Unganisha wasafirishaji waliothibitishwa na mizigo halisi katika njia kuu za biashara Afrika — kila kampuni na lori hukaguliwa na watu.
Cargo owners	Request transport, compare approved quotations, and follow your shipment — with one invoice from Encore.	Omba usafiri, pokea nukuu zilizoidhinishwa, na fuatilia mzigo wako — kwa ankara moja kutoka Encore.

Where	English	Kiswahili
Transporters	Register your fleet, submit your documents securely, and get verified to access cargo demand. No guaranteed volumes — only real opportunities.	Sajili magari yako, wasilisha nyaraka kwa usalama, na uthibitishwe ili ufikie fursa za mizigo. Hakuna ahadi za mzigo — ni fursa halisi tu.
Drivers	Your transport company invites you. See your trips, send updates and proof of delivery from your phone.	Kampuni yako ya usafirishaji inakualika. Angalia safari zako, tuma taarifa na uthibitisho wa kufikisha mzigo kupitia simu yako.
Trust	Registration is not verification. Our team reviews every company, truck and document before approval.	Kujisajili si kuthibitishwa. Timu yetu hukagua kila kampuni, lori na nyaraka kabla ya kuidhinisha.
Payments	One invoice, one payment to Encore. We handle transporter settlement.	Ankara moja, malipo moja kwa Encore. Sisi tunashughulikia malipo ya msafirishaji.

Payment wording is shown as a proposal because SRS §42.2 still requires confirmation of accepted methods, currency and procedures.

10 Data, Integrations & Technical Architecture

The public website is the front door of one Next.js + Supabase application (SRS §4.3). It reads very little and writes through controlled server-side routes only.

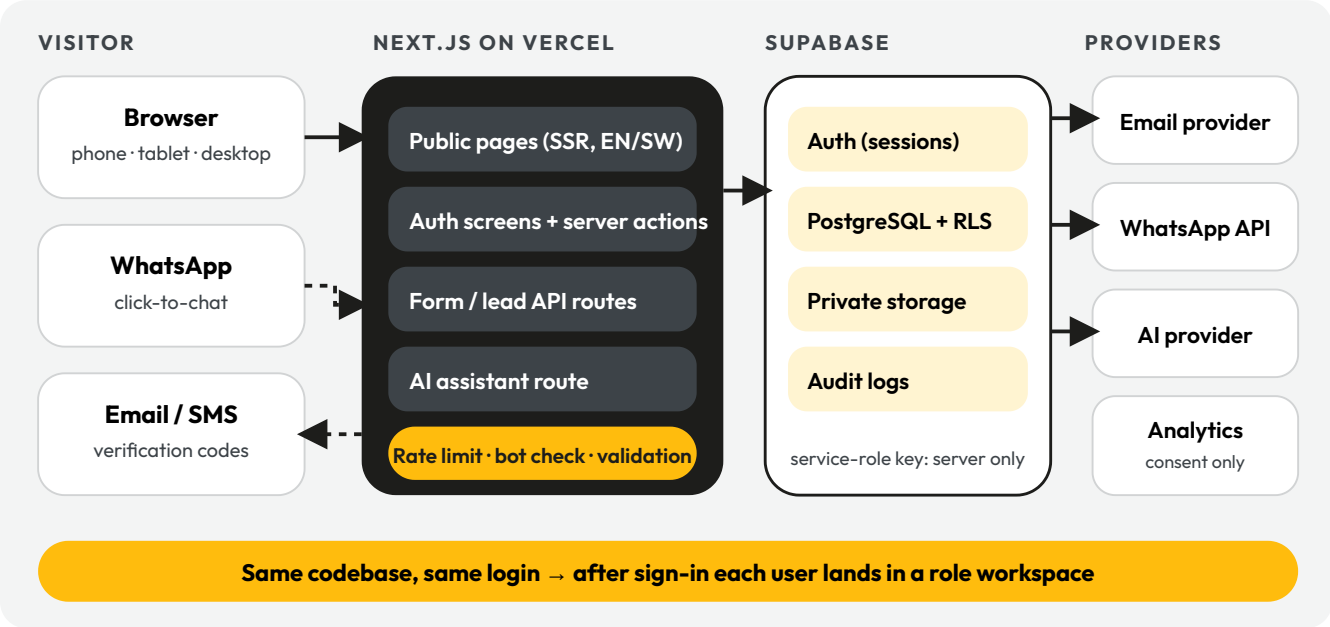

Figure 10.1 — Public website architecture (SRS §4.1, §32.9). Integrations run through server-side connectors; browser code never holds secrets.

10.1 What each public action reads and writes

Action	Data written (SRS §29 entities)	Controls
Register	`auth.users`, `profiles`, `cargo_owners` or `transporter_companies` + `company_members` (owner), `referral_attributions` (if code), consent record	Server action; unique email/phone; password hashed by Supabase Auth; RLS; audit log "account created".
Verify contact	Auth confirmation, `notification_logs`, `audit_logs`	Codes expire in 10 min; resend throttled; profile status → Active (limited).
Login / logout	Session; `audit_logs` (login, failed login)	Rate limit, lockout, non-enumerating errors, MFA for privileged roles.
Contact / inquiry	`marketing_leads` or `support_tickets` (+ `support_messages`)	Bot check; source "website form"; UTM fields; staff notification.

Action	Data written (SRS §29 entities)	Controls
Invitation request (affiliate, driver help)	`marketing_leads` with type partner/driver; staff later create `partner_invitations`	No account is created; no commission data is exposed.
Newsletter	`marketing_leads` + consent flag	Double opt-in; unsubscribe link.
AI assistant chat	`ai_conversations`, `ai_usage_logs`	Approved knowledge base only; no personal documents; escalation path; retention policy.
Page content (read)	Reads published values from `system_settings` (corridor status, contact details, FAQ)	Read-only public view; nothing else is readable by anonymous visitors.

10.2 Proposed technology for the public layer

Concern	Proposal	Status
Framework	Next.js (App Router) with TypeScript; server-side rendering and static generation for public pages	SRS §4.1
Styling	Tailwind CSS with design tokens from Section 04 (colours, Outfit, radius, spacing)	New — needs approval
Typeface	Outfit self-hosted through the Next.js font system; weights 300, 400, 500, 600, 700, 800, Latin subset, `font-display: swap`	Matches CargoLink
Internationalisation	Locale-prefixed routes (`/en` , `/sw`), message catalogues, `hreflang` ; French-ready	SRS §22.2
Auth & data	Supabase Auth, PostgreSQL with RLS, private Storage; server-only service-role key	SRS §4.1, §30
Forms	Schema validation shared by client and server; bot-protection service; rate limiting	Provider to be chosen
Hosting	Vercel (or approved environment); separate Development, Staging and Production	SRS §4.1, §39
Monitoring	Error logging, uptime checks, Web Vitals dashboard	SRS §39.2

11 Non-Functional Requirements

Targets marked “proposed” are starting points to be confirmed in technical design and validated before release, as SRS §31.1 requires.

≤ 2.5 s
Largest Contentful Paint on mobile 4G (proposed)

AA
WCAG 2.1 contrast and keyboard access

≥ 90
Lighthouse performance, accessibility, SEO (proposed)

360 px
Smallest supported screen width

ID	Area	Requirement	SRS
NFR-01	**Performance**	Initial page weight ≤ 1.5 MB on key pages; images in AVIF/WebP with responsive sizes and lazy loading; ≤ 4 font files preloaded; CLS ≤ 0.1; INP ≤ 200 ms. Designed for the mobile networks of Tanzania, Zambia and DRC.	§31.1
NFR-02	**Availability**	Hosting with monitoring and alerting; static fall-back page during maintenance; uptime commitment follows the selected providers.	§31.2
NFR-03	**Accessibility**	WCAG 2.1 AA: text contrast ≥ 4.5:1 (see Section 4.2 pairings), visible focus ring (gold ring + charcoal outline), full keyboard navigation, labelled form fields, error text tied to fields, alt text, semantic landmarks, `lang` attribute per locale, no information by colour alone.	§6.9
NFR-04	**Usability**	Usable by non-technical customers; plain-language copy; maximum 2 clicks from Home to Register; forms never exceed one screen of fields without grouping.	§31.4
NFR-05	**Compatibility**	Latest two versions of Chrome, Edge, Firefox, Safari, Samsung Internet; Android 9+ and iOS 15+; graceful behaviour on low-end phones.	§31.5
NFR-06	**Security**	HTTPS with HSTS; Content-Security-Policy; secure, HttpOnly, SameSite cookies; CSRF protection; input validation and output encoding; rate limiting; bot protection; no secrets in client code; server-side authorisation; dependency scanning; RLS on every table touched.	§30.1–30.3
NFR-07	**Privacy**	Cookie / analytics consent banner; analytics off until consent; data-subject request path (access, correction, deletion); retention periods defined; country privacy requirements reviewed; cross-border processing disclosed.	§30.5
NFR-08	**Auditability**	Login, account creation, consent and content changes recorded with actor, record, timestamp.	§30.4
NFR-09	**Scalability**	Static generation and CDN for public pages; architecture supports growth of users, countries and corridors without redesign.	§31.3

ID	Area	Requirement	SRS
NFR-10	**Maintainability**	Modular components; design tokens; consistent naming; documented environment variables; version control; separate Development / Staging / Production.	§31.6, §39.1
NFR-11	**Backup & recovery**	Database and configuration backed up; recovery tested periodically.	§31.7
NFR-12	**SEO**	Crawlable server-rendered HTML; one H1 per page; descriptive titles; schema markup; fast mobile pages; localised sitemaps.	§7.2

12 Acceptance Criteria

The public website is accepted for release when every “Must” item below passes User Acceptance Testing (SRS §37.5) and Encore signs off.

#	Criterion	Test	SRS basis
A1	All 14 SRS pages exist in English and Swahili, reachable from navigation or footer, with working internal links.	Review	§7.1
A2	Outfit and the 7-colour palette are used consistently; no unapproved colours except form error/success.	Design review	§6.9
A3	Header matches Section 4.5 on desktop and collapses correctly on mobile; “Login →” works in both languages.	Visual + functional	§7.2
A4	Registration offers only Cargo Owner and Transporter; Driver, Affiliate and staff cannot self-register.	Functional + API attempt	§38 #2 #4 #6 #7
A5	A new user can register, verify contact, and reach a limited dashboard; the UI does not call them verified.	End-to-end	§5.3, §5.6
A6	Login works with email or phone; forgot-password works; five consecutive failures trigger throttling; error messages do not reveal whether an account exists.	Security test	§30.1
A7	After login each role lands in the correct workspace; direct URLs to other roles' pages are denied on the server.	Access-control test	§4.3, §37.2
A8	Staff sign-in uses username + password, has no sign-up, and forces password change at first login.	Functional	§5.2
A9	Contact, inquiry and invitation-request forms create leads/tickets with source and UTM data and notify staff.	Functional	§25
A10	No page, API or storage link exposes private documents or confidential records to anonymous users.	Security test	§7.2, §38 #9
A11	No commission rate, minimum fee, affiliate percentage or guarantee statement appears on any public page.	Content audit	§19, §3.2
A12	Corridor page shows Tanzania–Zambia (Core pilot) and Tanzania–DRC (Expanding) with route lists; Malawi, Rwanda, Burundi shown as Planned.	Review	§24
A13	The AI assistant (when released) answers in EN/SW from approved content, discloses it is automated, and refuses restricted actions.	Scripted conversation test	§22
A14	Language switch preserves the current page; `hreflang` and localised sitemaps are present.	SEO test	§22.2

#	Criterion	Test	SRS basis
A15	Mobile Lighthouse: performance, accessibility and SEO meet the agreed targets on Home, Registration and Login.	Automated	§31
A16	Analytics load only after consent; consent choice is stored and changeable.	Functional	§30.5
A17	Legal pages approved by Encore's legal adviser are published; acceptance version is recorded at registration.	Review	§30.5
A18	Security and UAT testing completed for the release, material issues resolved or formally accepted.	Sign-off	§37, §38 #26

13 Delivery Plan

The website follows the SRS roadmap: the public site and registration belong to **Phase 1 — Secure Foundation (Nov–Dec 2026)**; WhatsApp automation to Phase 2; the public AI assistant to Phase 3.

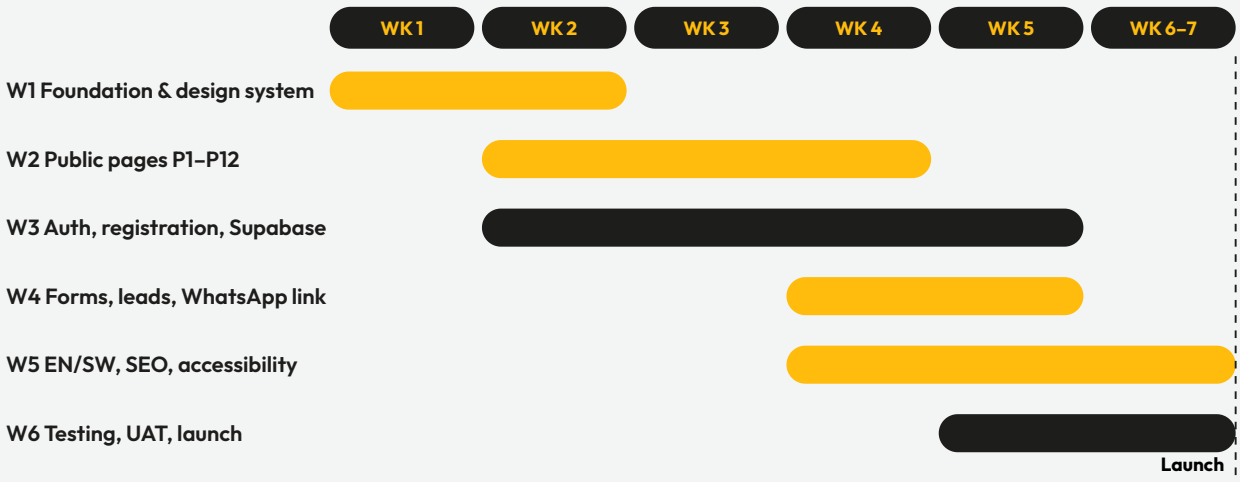

Figure 13.1 — Proposed website schedule inside SRS Phase 1. Dates depend on approvals, supplied content, provider access and testing outcomes (SRS §34).

Release	Timing	Scope
R1	Nov – Dec 2026 (SRS Phase 1)	Design system, header/footer, all 14 pages in EN/SW, registration + login + contact verification, staff sign-in, forms and leads, WhatsApp click-to-chat, SEO, consent banner, analytics, security and UAT.
R2	Jan – Feb 2027 (Phase 2)	WhatsApp Business integration for form acknowledgements, verification notices and templated messages; consent and opt-out handling.
R3	Mar – May 2027 (Phase 3)	Public AI Assistant (EN/SW) on the approved knowledge base, with human escalation; FAQ powered from the same source.
R4	Nov – Dec 2027 (Phase 6)	French locale; Malawi, Rwanda and Burundi corridor pages; country-specific onboarding content.

14 Open Decisions & Client Inputs

Items needed from Encore Holdings Group before or during the build. Each has a recommended default so work can continue while the decision is pending.

#	Decision / input	Recommended default	SRS
1	**Confirm colour codes (three typographical issues) and supply the logo as SVG with a reversed version.**	Use #FFBC0D, #1D1D1B, #FFFFFF, #D1D3D4, #A7A9AC, #3D4348, #000000.	§6.9
2	**Official support phone, WhatsApp number, email, addresses, business hours, social accounts.**	Placeholders until supplied; nothing invented.	§41 #1
3	**Production domain, DNS and hosting ownership.**	Encore-owned accounts for domain, Vercel and Supabase.	§39.3, §41 #4
4	**Public wording for payments: accepted methods, invoice currency, deposit rules.**	Show “one invoice, one payment to Encore” only; methods added after Finance approval.	§42.2
5	**Publish commission or affiliate percentages?**	No. Keep hidden until formally approved.	§42.1
6	**Track Shipment: sign-in required, or public lookup by reference + one-time code?**	Sign-in required at launch (location data is restricted).	§18.4
7	**Affiliate programme: invitation-only or open application with approval?**	Invitation-only, with a “Request an invitation” form.	§21.3–21.4
8	**Registration: email and phone both mandatory (proposed) or either one?**	Both mandatory (WhatsApp and recovery depend on phone).	§5.3
9	**Where the staff sign-in link lives.**	Footer link to `/staff`, not in the main navigation.	§5.2
10	**Country document checklists for Tanzania, Zambia, DRC.**	Generic list from SRS §11.1 until country lists are supplied.	§41 #5
11	**Legal text for Privacy Policy and Terms, per country.**	Outline from SRS; final text by Encore's legal adviser.	§30.5, §42.4
12	**Photography, illustration and partner-logo rights; permission to show any association or regulator names.**	Encore-owned illustrations; no third-party logos without written permission.	§7.2

#	Decision / input	Recommended default	SRS
13	**Public statistics.**	None at launch; consider verified live counters later.	§35.2
14	**Professional Swahili translation and later French.**	Draft Swahili in this SRD; translator review before launch.	§22.2
15	**AI provider and data-processing approval for the public assistant.**	Release R3; no sensitive data sent.	§22.6, §42.3
16	**Analytics and bot-protection providers.**	Privacy-friendly analytics after consent; invisible bot check.	§7.2
17	**Tailwind CSS added to the technology stack.**	Approve — it is the fastest way to reproduce the CargoLink-style components.	§4.1
18	**Pages not in SRS §7.1 (Team, Careers, Blog, Case Studies, Investors).**	Excluded at launch; can be added by change request.	§43
19	**Driver-reporting deadline (proposed 16:00 EAT) shown publicly?**	Not shown until Encore approves.	§10.3

A SRS Coverage Matrix

Every SRS section was reviewed. DIRECT = shapes the public website · INDIRECT = explained or referenced on the public site · NONE = private platform only.

§	SRS section	Relevance	Where used in this SRD
1	Executive summary, financial and business principles	DIRECT	Sections 02, 09 (one-invoice message, trust over automation)
2	Vision, mission, objectives, Balanced Growth	DIRECT	P1, P2; VERIFY · MATCH · DELIVER · REPEAT
3	Project scope (in / out)	DIRECT	Section 01; no-guarantee guardrails
4	System architecture	INDIRECT	Section 10
5	User roles and access control	DIRECT	Section 07, P4–P6, RG / LG requirements
6	Super Admin dashboard	NONE	Brand colours and theme (§6.9) used in Section 04; notification of new leads (WEB-052)
7	Public website and customer acquisition	DIRECT	Sections 05, 06, 08
8	Transporter onboarding and company management	DIRECT	P5, P14, Figure 6.3, Figure 7.5
9	Fleet and truck management	INDIRECT	P5 (truck data, fleet dashboard preview)
10	Driver management and portal	INDIRECT	P6
11	Document management and verification	INDIRECT	P3, P5, P10, WEB-017
12	Cargo owner management	INDIRECT	P4, RG-03
13	Cargo request management	INDIRECT	P4 (information needed)
14	Truck matching engine	INDIRECT	P3 (criteria, human review)
15	Quotation management	INDIRECT	P3, P4
16	Booking management	INDIRECT	P3
17	Shipment and dispatch management	DIRECT	Lifecycle graphic (Figure 6.2), P1, P3
18	GPS, maps and shipment visibility	INDIRECT	P3, P10, Track gate (S2)
19	Revenue, commissions, commercial rules	INDIRECT	Guardrail: not published (WEB-013)

§	SRS section	Relevance	Where used in this SRD
20	Central invoicing, payment, settlement	INDIRECT	P3 payments block, P10
21	Affiliate and broker programme	DIRECT	P8, RG-07, WEB-028, WEB-031
22	Encore AI Assistant	DIRECT	WEB-040 … 043, Release R3
23	WhatsApp and email automation	DIRECT	WEB-034, RG-09, Release R2
24	Border data and cross-border operations	DIRECT	P7, WEB-011, WEB-016
25	Marketing, lead and growth management	DIRECT	WEB-030 … 031, Section 10.1
26	Customer support and incident management	DIRECT	P9, WEB-030
27	Reporting and business intelligence	NONE	—
28	Notification and event management	INDIRECT	Verification codes, form acknowledgements, WEB-033
29	Database and data management	INDIRECT	Section 10.1
30	Security and data protection	DIRECT	LG-07, NFR-06, NFR-07, P11
31	Non-functional requirements	DIRECT	Section 11
32	Third-party integrations	INDIRECT	Figure 10.1
33	System workflows	DIRECT	Figure 7.5 (onboarding journeys)
34	Implementation roadmap and MVP priority	DIRECT	Section 13
35	Balanced Growth and pilot framework	INDIRECT	Guardrail: no vanity statistics (WEB-014, WEB-018)
36	Operating cost and development budget	NONE	Not repeated here; commercial matter
37	Testing and quality assurance	INDIRECT	Section 12 test methods
38	Acceptance criteria	DIRECT	Section 12 (items #2, #4, #6, #7, #9, #26 adopted)
39	Deployment and handover	INDIRECT	Section 10.2, Section 14 #3
40	Project risks and mitigation	INDIRECT	Form protection, fake-referral controls
41	Client responsibilities and inputs	DIRECT	Section 14
42	Open business and technical decisions	DIRECT	Section 14 (commercial, payment, technical, legal items)

§	SRS section	Relevance	Where used in this SRD
43–45	Change management; governance; sign-off	NONE	Appendix B (sign-off); change requests for new pages
46	Final project statement and tagline	DIRECT	Hero, footer, About, vocabulary

B Review & Sign-off

By approving this document, Encore Holdings Group confirms that the requirements above are the agreed basis for design and development of the public website, subject to the open decisions in Section 14. Material changes after approval follow the change-management process of the SRS (§43).

Approval	Name	Signature	Date
